This pulverization is evidently the marsh. result of wave action still in progress. In turning up the surface a concentric or parallel arrangement was observable, the head of the middle channel. The course of this channel or about the 20th day of November, his negro man, the longest sweep, viz: the N. W. winds down the river and dry middle shoal. It may be found necessary to form a shoal properly known as "MAURICE HAYES," although N. E. winds from Wilson's Bay. The winds from these at the mouth of the N. E. Branch.

quarters control the heaviest wave-stroke, in obedience to Wright's Island should be protected from abraison. The rice Hays or "Joe Smith." Said negro is 25 years of age, 5 which the small concretions of dead oyster shells are heaped entrance to the ocean should be enlarged and deepened, and feet 5 inches high, a bright mulatto, his upper front teeth large and prominent, very thick in the neck. He is supposed to be lurking in New Hanover, Sampson or Duplin. The above reward will be paid for his delivery to me, or his confinement in any jail so I can get him.

H. BONHAM.

which the small concretions of dead oyster shells are heaped up in ridges perpendicular to the direction of its force. Modifications of this form are attributed to the eddies and cross currents, and to the increase of the Faccoon Cyster, conformable to the laws of its growth.

The channel at this point is very irregular, disturbed by question of expenditure with limited means, I leave the sequence. The channel at this point is very irregular, disturbed by question of expenditure with limited means, I leave the seeddies and whiris, having, at low-water, a depth of less than | lection to the judgment of the Board. The above estimates

and furnish the strongest argument against the injudicious ny. The SUBSCRIBER RESPECTFULLY INFORMS his friends and the public, that he has to day opened at the above stand, being that formerly occupied by Messrs.

The more serious obstructions to navigation occur at this point. The marsh being an alluvial deposit at the point of the above stand, being that formerly occupied by Messrs.

The bottom presents no great difficulty to dredging by large establishments at the North, which will furnish him with no unlimited supply of finished or unfinished foreign or domestic MARBLE of all qualities, is prepared to fill also transact a General Commission business, for the sale of every description of Country Produce, to which all orders for MONUMENTS AND TOMB-STONES—and stead to the town and country trade, which he will sell choap for cash.

He will also transact a General Commission business, for the sale of every description of Country Produce, to which particular attention will be given.

M. M. SIKES. At this point the river suddenly contracts, finding its way by deposit and the space afforded by the large indents, furnish a winding channel 300 feet in width, through a large alluvial marsh. Although probably ages in forming, the marsh is a more recent deposit, caused in part by the ocean since the subscriber offers for sale about ONE THOU. river began to flow within its present boundaries. Having dents The river, however, labors under some difficulties THE subscriber offers for sale about ONE THOU all the peculiarities of a delta formation, it exhibits the same that engineering science can hardly obviate. The growth of Wil-nington, on the east side of Cape Fear River; bounded anastomising character in reverse with blind coves, remarka-

A remarkable change has taken place at the mouth of the river since the survey of Lieut. Maffit in 1851. The channel of that date has closed, and a new one opened to the north and east of Wright's Island. Another change, of greater importance, may be expected. The river has begun to wear

We now come to the consideration of the Bar. The stor-

force being with the tide wave, perpendicular to the trend of for Bell, who, by the addition of those votes to the the coast. The variable character of the quicksand bar is ones counted, would have been elected. well known; not only changing with every wind, but, at times, threatening a temporary closure of the inlet by storms from the southern points of the compass. A bar beset with such difficulties, would appear to present insurmountable obstacles to an amelioration of its condition. Much can be done by a strict conformity to well established principles. The existence of such a difficulty is due to the equilibrium of certain forces. Careful determination of the value of these forces, will enable us to estimate the amount of disturbing miles on the latter, and containing about 2000 acres. The above Lands contains four crops of Turpentine boxes, a large quantity of cypress timber, black-jack and light wood.—Also, two never failing springs of excellent water. The above Lands were formerly owned by Law & Savage. Any increased scouragel; and I had the satisfaction of witnessing the same effect produced by the land flood swollen by the rains. These facts show the importance of a previous statement, that there was a large tidal capacity unsupplied by the FOR SALE,

No advertisement, reflecting upon private character can under ANY CIRCUMSTANCES, be admitted.

We republish the following report, as revised, as above stated, furnish insuperable objections to any structure erected, for purposes of improvement, outside of the har-bor. Piers can only direct the existing force of water, or protect without materially increasing its action, and their erection would, I think, be attended with an advance of the shore line and bar, without any increase in the depth of water. Nor would an expensive break-water meet all requirements. History of the successive difficulties has now vey of New River and Inlet, together with a chart and plan | been given, which will afford a mean's of determining the

It is evident that a plan for the complete improvement should embrace three requisites. The advantages of this improvement have long been evi-1st. A channel of sufficient dimensions through, or avoiding the Oyster Shoals.

2nd. The fixation of the tortuous and variable terminus of the channel through the marsh. And, 3rd. That the plan should be such as to give a greater

depth of water upon the bar. The produce which is now coveyed to Wilmington, Beau-fort and Newberne, by land, will find a cheaper and more ex-I have two plans to offer for the attainment of these objects, both of which by operating within the harbor are cal-culated to remove existing obstacles, and at the same time to increase the natural dredging power of the river. Nature will thus become an agent in keeping down the bar. I leave these important considerations to those immediately A description of the distinguishing features of the river is

Plan 1st. I propose to avoid the shell obstructions, by dredging a channel through the marsh, which shall enter the marsh at Cedar Creek Cove, and passing through the necessary to an appreciation of the plan which I have to sub-The length of its course from Jacksonville to the bar is cove, to join the main channel by an easy curve. This cut about 25 miles; its average width is nearly two miles. The will have a mid-channel 60 feet wide by 7 deep, terminating first five miles is of a fluvial character. Thence the course with a surface width of 300 feet. The stream should be conrise, in places, in a perpendicular escarpment of clay, to a which shall compet the momentum of the tide in an invariheight of 25 feet. The average depth of the channel—which is 18 to 20 feet at Jacksonville—is 7 feet. The tide does not extend four miles above the mouth of the river. It thus forms a large slack-water basin, without a definite channel, ble law, which determines the tenacity of banks capable of almost without a current, and without the more recent allu- resisting a certain velocity. I recommend an artificial develvial deposit, by which the banks of most rivers are demarked opment conformable to this principle. I think it important from the surrounding country. One striking exception to the close the old channel at its junction with the new, by a the latter pecularity is found at the mouth of the river. The present channel can be kept open for purposes of navigation until the completion of this cut. Wood cannot be used, unless protected from the action of the toredo. Shells, river. Careful consideration is necessary for determining a the most available material, loses its weight and cohesion afplan which shall apply remidially in each compartment, and possess consistency of principle, and such unity of design, as ly increase the estimate for structures which require the use of that material. I propose, therefore, if found less expensive, to use beton or hydraulic concrete, which has the advantage of being made upon the spot, of any required size.

First: A collection of islands or shoals, consisting of oyster shells, extending along and across the channel for a distance of more than half a mile, form the most serious impediment to navigation

The remaining were placed along the I would advise against the closing of those channels which can be permitted to remain without injury to the improve-Diagram No. 1 shows the interesting character of the re- ment. The banks would be unable to withstand the increased sults obtained; those bearing specially upon the improve- velocity of the current, without additional protection. Nature meets the demand upon her by a net-work of small channels, and any increase of velocity without an equivalent so-lidification of the banks would give rise to a channel more tortuous than the present one. The objection, therefore, is II. water L. water one of economy. The necessary increase of velocity can be met by sloping the bank and protecting by shells at exposed points. Sketch No. 2 exhibits the appearance of the river after this improvement. The letters D show the points of

deposit, and C the centre of scourage. The red lines show the position of the guiding walls of hydraulic concrete. The length of the cut is 1,770 feet, having a mid-channel 40 feet wide by 10 deep. Amount of dredging 173,480 cubic yards of lighter material at 16 cents per yard

Cost of improvement through Wright's Island ... \$38,645 00 This plan would, I believe, give one foot greater depth upon the bar The second plan proposed is, to cut a channel through the oyster shouls and Shell Islands sixty feet wide and seven feet deep. The dredged material should be placed on each side of the channel, between those shoals which are perpendicular deep. The theoretical depth of water upon the bar, after ment. The same cause which heaps up the shell islands deductions for friction, resistance to the wave stroke, &c., would, it may be thought, be still operative in closing any should be 6.6 feet at mean low water.* This conclusion leads new channels; but the larger islands, acting as breakwaters. at once to the principle specially applicable to the improvemem of the Bar, viz: An increase in the tidal supply.

The would afford protection against the prevailing winds, while
the momentum of the stream, being a function of its depth. the momentum of the stream, being a function of its depth, The character of the formation of the shell islands also would forever keep the channel free from deposits. The leads to facts equally important in their relation to the plan dredging should be continued through the sand shoal opposite Swan's Point. From the S. W. point of the marsh, a It appears difficult at first glance, to discover any law or jetty should be constructed of the following dimensions:-

This cut is longer by 4 of a mile than that through the corresponding with the principal axes of the shoals. By re- should be freed from shoals, the sharp angles cut off, and a ference to the chart it will be seen that the axes of the larger shoal are perpendicular to the prevailing winds, which have W. branch should be closed, and also the passage west of the

A few words in regard to the permanency of the improvevation of the bed of the river above the obstructions may also be looked for. A comparison with the survey of 1837 shows a remarkable permanence in the boundaries of the marsh. An appreciable deposit over the bottom of the river below Snead's Ferry was detected. The small amount of the good grounds for the conclusion that many years must clapse before danger need be apprehended from this source. The improvement will cause the deposit to take place in the in-

I am, very respectfully, gentlemen,

Your obedient Servant S. THAYER ABEKT, Civil Engineer.

NEW ORLEANS, Feb. 20 .- The legislature of this State has passed an act removing Joseph Hufty, the present incumbent (American) of the sheriffalty of New Orleans. The bill passed both branches of the

legislature by a strict party vote, and has caused considerable feeling in this city. The position occupied by Mr. Hufty was claimed by Mr. Bell, the democratic candidate, on the ground the long Atlantic slope, reaches the mouth of the river with that at the election in November last certain ballot-The improvements consist of a small Dwelling, Kitchen a head of 4 to 5 feet, and a greatly diminished velocity. Alwere alleged to have given a considerable majority

The district court ruled the boxes in question out of the canvass, and gave the sheriffalty to Hufty,

who is now removed by the legislature. NEW YORK PORT CHARGES .- The New York Courier ascribes to the reasonableness of the port charges of that city one of the great attractions that bring there the canvas of all nations. The expense incurred in a ship of 1,000 tonnage exhibits these extra-

ordinary contrasts:

 Amesterdam
 \$2,100

 Leghorn
 2,000

 London and Havre, each
 1,340

 Liverpool
 1,300

 Low port charges are undoubtedly among the most lowerful of inducements to bring marine commerce

to a city, and, when conjoined with other advantages, must prove irresistable. Death of an Authoress.
